PROJECT DEMONSTRATION

1. PHASE OVERVIEW

The Project Demonstration Phase is the final phase of the Auto Ticket Classification using Flow Designer project.

The main purpose of this phase is to demonstrate the completed project and explain its purpose, functionality, working process, benefits, and final output.

The demonstration provides a complete overview of how the ServiceNow-based system automatically classifies IT support tickets using Flow Designer.

The project demonstration is recorded as a video with screen sharing and student voice-over. The video explains the project from ticket creation to automatic classification and final email notification.

2. PROJECT NAME

Auto Ticket Classification using Flow Designer

3. PURPOSE OF THE PROJECT

The purpose of the project is to automate the classification of IT support tickets in a school environment using ServiceNow Flow Designer.

The system analyzes the Short Description of a newly created ticket and identifies predefined keywords related to the reported issue.

Based on the identified issue, the system automatically assigns the appropriate Category and Subcategory.

The automation reduces manual classification effort and provides a structured method for managing IT support requests.

4. PROBLEM ADDRESSED

The school IT helpdesk receives different types of support requests from students and teachers.

These requests may be related to:

Wi-Fi problems.

Projector problems.

Password and login issues.

Slow computer problems.

Manually reviewing and classifying each ticket can require additional time and may result in inconsistent classification.

The proposed project addresses this problem by automatically classifying the tickets using Flow Designer.

5. PROJECT BENEFITS

The major benefits of the project include:

1. Reduction in manual ticket classification.
2. Faster processing of IT support requests.
3. Consistent Category and Subcategory assignment.
4. Automatic ticket updates.
5. Automated email notification to the caller.
6. Easy maintenance using Flow Designer.
7. Structured storage of ticket information.
8. Ability to extend the system with additional classifications.

6. PROJECT WORKING PROCESS

The complete working process of the project is demonstrated step by step.

Step 1 – Create a Ticket

A student or teacher creates an IT support ticket by entering the Caller and Short Description.

Step 2 – Ticket Creation Trigger

Once the ticket is created, the configured Flow Designer flow is triggered.

Step 3 – Analyze Short Description

The system checks the Short Description for predefined keywords.

Step 4 – Identify Issue

The Flow Designer identifies the type of issue based on the available conditions.

Step 5 – Assign Category

The appropriate Category is automatically assigned.

Step 6 – Assign Subcategory

The corresponding Subcategory is automatically assigned.

Step 7 – Update Ticket

The ticket record is updated with the classification values.

Step 8 – Send Email

An automated confirmation email is sent to the caller.

Step 9 – Verify Final Output

The final ticket record is checked to confirm that the correct Category and Subcategory have been assigned.

7. CLASSIFICATION DEMONSTRATION

The project demonstration includes the following classification examples:

Issue	Category	Subcategory
Wi-Fi / Network	Network	Wi-Fi
Projector	Hardware	Projector
Forgot Password	Access	Forgot Password
Slow Computer	Performance	Slow Computer

Each example is demonstrated by creating a corresponding ticket and verifying the automatically generated classification.

8. WI-FI DEMONSTRATION

A sample ticket is created with the Short Description:

WiFi not working in library

After submitting the ticket, the Flow Designer automatically processes the record.

The final output should display:

Category: Network

Subcategory: Wi-Fi

This demonstrates the automatic classification of a network-related issue.

9. PROJECTOR DEMONSTRATION

A sample ticket is created with the Short Description:

Projector not turning on

After the flow executes, the system automatically assigns:

Category: Hardware

Subcategory: Projector

This demonstrates the automatic classification of a hardware-related issue.

10. PASSWORD DEMONSTRATION

A sample ticket is created with the Short Description:

Forgot password

The Flow Designer identifies the password-related condition and automatically assigns:

Category: Access

Subcategory: Forgot Password

This demonstrates the classification of an access-related issue.

11. SLOW COMPUTER DEMONSTRATION

A sample ticket is created with the Short Description:

Slow computer

The system processes the ticket and automatically assigns:

Category: Performance

Subcategory: Slow Computer

This demonstrates the classification of a performance-related issue.

12. EMAIL NOTIFICATION DEMONSTRATION

The project demonstration also shows the automated email notification functionality.

After a ticket is created and processed, the system sends an email to the caller.

The demonstration verifies:

Email recipient.

Email subject.

Email body.

Ticket submission confirmation.

This demonstrates that the system can automatically communicate the ticket submission status to the caller.

13. DEMONSTRATION VIDEO STRUCTURE

The complete project demonstration video follows the structure below:

Introduction

↓

Project Name

↓

Project Purpose

↓

Problem Statement

↓

Project Benefits

↓

System Configuration

↓

Flow Designer

↓

Create Sample Ticket

↓

Automatic Classification

↓

Email Notification

↓

Final Output

↓

Conclusion

14. VOICE-OVER CONTENT

The student voice-over explains the project while demonstrating the system.

The explanation includes:

Project name.

Purpose of the project.

Problem addressed.

Benefits of the project.

Working process.

Ticket creation.

Flow Designer automation.

Automatic Category assignment.

Automatic Subcategory assignment.

Email notification.

Final output.

The voice-over provides a clear explanation of each stage while the project is demonstrated through screen sharing.

15. FINAL OUTPUT

The final output of the project is an automatically classified IT support ticket.

For example, when a ticket contains a Wi-Fi-related issue, the system automatically updates the ticket as:

Category: Network

Subcategory: Wi-Fi

Similarly, other supported issues are automatically classified according to the configured Flow Designer conditions.

The final output also includes the automated email notification sent to the caller.

16. DEMONSTRATION CHECKLIST

No.	Demonstration Requirement	Status
1	Project Name	Completed
2	Project Purpose	Completed
3	Problem Explanation	Completed
4	Project Benefits	Completed
5	System Working Process	Completed
6	Ticket Creation	Completed
7	Flow Designer Automation	Completed
8	Automatic Classification	Completed
9	Email Notification	Completed
10	Final Output	Completed
11	Screen Sharing	Completed
12	Voice-Over Explanation	Completed

17. DEMO VIDEO SUBMISSION

The complete project demonstration is recorded as a video.

The demonstration video includes:

Screen sharing of the project.

Student voice-over and explanation.

Project name.

Purpose of the project.

Project benefits.

Project execution and working process.

Final output.

The recorded video is uploaded to Google Drive, and the sharing permission is configured so that the required viewers can access the video.

18. PROJECT DEMONSTRATION OUTCOME

At the end of this phase, the complete project is demonstrated successfully.

The demonstration shows that:

1. A new IT support ticket can be created.
2. Flow Designer is triggered automatically.
3. The Short Description is analyzed.
4. The appropriate issue is identified.
5. Category is assigned automatically.
6. Subcategory is assigned automatically.
7. The ticket record is updated.
8. An email notification is generated.
9. The final output can be verified.

19. CONCLUSION

The Project Demonstration Phase provides the final presentation of the Auto Ticket Classification using Flow Designer project.

The demonstration explains the purpose of the project, the problem addressed, the benefits, the complete working process, and the final output.

Through screen sharing and voice-over explanation, the project demonstrates how ServiceNow Flow Designer automatically classifies IT support tickets based on predefined issue keywords.

The final demonstration confirms the complete workflow from ticket creation to automatic classification and email notification, providing a clear representation of the implemented project and its functionality.
